1. Why do we use exception handlers?

1 / 1 point

- ☐ To read a file
- ☒ To catch errors within a program
- ☐ To terminate a program
- ☐ To write a file

Correct

Correct! Exception handlers catch errors in the codes.

2. What is the purpose of a try...except statement?

1 / 1 point

- ☐ Executes the code block under a specific condition
- ☒ Catch and handle exceptions when an error occurs
- ☐ Crash a program when errors occur
- ☐ Executes only when a particular condition is true

Correct

Correct! It handles code crashes in case of errors.

3. Consider the following code:

1 / 1 point

If the user enters the value of `b` as 0, what is expected as the output?

```
1  a = 1
2  try:
3      b = int(input("Please enter a number to divide a: "))
4      a = a / b
5      print("Success a =", a)
6  except:
7      print("There was an error")
8
```

- ☐ Success a=1/0
- ☒ There was an error
- ☐ Success a=NaN
- ☐ ZeroDivisionError

Correct

Correct! This division will generate an error, leading to the exception part.
